PROFESSIONAL DESIGN PORTFOLIO

Mohiddin Moghal

Oracle VBCS / OIC Developer with a design focus on enterprise workflows, dashboards, integrations, and Agentic AI in OIC.

PROFILE SNAPSHOT

Design clarity backed by technical execution.

I translate complex Oracle processes into usable screens, workflow states, automation patterns, and support-ready dashboards.

Mohiddin Moghal

Oracle VBCS / OIC Developer

Enterprise workflow design | dashboards | integrations | Agentic AI in OIC

Oracle | INFOLOB | Etisalat

01 Workflow-first thinking

Approvals, exceptions, timecards, payroll cycles, and role-based steps made easier to follow.

02 Integration visibility

OIC flows designed around triggers, transforms, routing, failure recovery, and audit traces.

03 Data-aware interfaces

Dashboards and pages that expose status, ownership, validation results, and next action.

04 AI-assisted automation

Learned and worked on Agentic AI in OIC for governed decision-support automation.

DESIGN CAPABILITIES

What I bring to enterprise product design.

A balanced mix of UI thinking, integration logic, data understanding, security awareness, and automation discipline.

VBCS interface design

Responsive pages, reusable components, approval screens, guided forms, and dashboard layouts.

OIC workflow design

Trigger, validate, transform, route, observe, recover, and improve patterns for integrations.

Dashboard thinking

Status-first views for payroll, OTL, billing, exceptions, audits, approvals, and decisions.

Security journey design

Page restrictions, role-aware access, approval tiers, and controlled enterprise experiences.

Data and API design

Fusion REST APIs, BIP, FBDI, ATP sync, SQL, PL/SQL, APEX ORDS, Postman, and SOAP UI.

Agentic AI in OIC

Agent-style orchestration, AI-assisted decisions, governed actions, escalation, and audit-aware automation.

SELECTED WORK - ORACLE

Payroll, OTL, VBCS applications, and database automation.

Projects: KCB, Boutique, QIA, and QSA. Confidential implementation details are omitted.

Payroll processing and support

- Delivered payroll support and enhancements for accurate payroll cycles.
- Implemented payroll rule changes and PL/SQL-based data corrections.
- Built automated OIC scripts for payroll data integrations.

OTL module maintenance

- Managed OTL configuration, issue resolution, and timecard validations.
- Integrated OTL data with payroll systems using OIC workflows.
- Designed compliance-aware validation and support flows.

VBCS application development

- Designed VBCS applications for internal tools and payroll/OTL dashboards.
- Created responsive UI components for approvals and submissions.
- Supported real-time data visualization and user-focused workflows.

Database development

- Created PL/SQL scripts, packages, and procedures for automation.
- Generated audit and compliance reports with SQL and OIC pipelines.
- Improved process traceability and correction readiness.

SELECTED WORK - INFOLOB / ETISALAT

Subscription management, data sync, billing, CDR automation, and security workflow design.

A portfolio view of the outcomes behind the VBCS/OIC, SQL, PL/SQL, and APEX ORDS work.

Custom Subscription Management

Tailored Oracle Fusion REST API application for subscription handling tasks and operational control.

FBDI Customer Onboarding

Efficient customer data imports into Oracle Fusion with PAAS-scale reliability and accuracy.

ATP Data Sync

Real-time ATP sync from Oracle Fusion to ATP database through BIP-based data transfer.

Subscription Billing Generation

Monthly, quarterly, one-time, and usage-based billing design aligned to subscription terms.

CDR Automation and Security

CSV-driven usage billing automation, page restrictions, and two-tier approval workflow design.

AGENTIC AI IN OIC

Learned and worked on agent-style orchestration in Oracle Integration Cloud.

How AI-assisted automation can observe events, reason about context, call integrations, and escalate safely.

01

Observe

Events, logs, payloads, exceptions

02

Reason

Classify, prioritize, recommend

03

Act

OIC flows, APIs, approvals, alerts

04

Govern

Audit, escalation, safe handoff

- Use AI for classification, recommendations, exception triage, and guided follow-up.
- Keep humans in the loop for approvals, risk-sensitive decisions, and final accountability.
- Design with governance: audit trails, escalation, policy boundaries, and traceable actions.

DESIGN SYSTEM MINDSET

From screens to reliable enterprise experiences.

A clean visual structure helps users understand where they are, what changed, and what action is needed next.

User experience layer

1

Screens

Responsive views, guided forms, approval panels, and dashboard pages.

2

States

Draft, submitted, approved, rejected, synced, failed, corrected, and completed.

3

Validation

Business-rule checks, timecard accuracy, billing terms, and data-quality flags.

System reliability layer

4

Integration

Triggers, transformations, routing, payload mapping, and recovery paths.

5

Observability

Logs, statuses, audits, reports, exception handling, and support traces.

6

Governance

Role restrictions, two-tier approvals, policy boundaries, and safe AI escalation.

TECHNOLOGY AND TOOLSET

Technical depth that supports better design decisions.

The portfolio highlights design skill, while the stack shows the implementation depth behind the work.

Oracle platform

Oracle Integration Cloud (OIC) | Oracle VBCS | Oracle Fusion REST APIs | APEX ORDS

Data and backend

SQL and PL/SQL | Packages and procedures | BIP reports | ATP database sync

Testing and APIs

Postman | SOAP UI | Payload validation | Integration debugging

AI and learning

Oracle Generative AI | AI Vector Search | Python - NLP using NLTK | Agentic AI in OIC

CREDENTIALS AND EXPERIENCE

A compact view of certifications, employment history, and ongoing learning.

Certifications

- Oracle Certified Application Integration Professional
- Oracle Redwood Application Associate
- Oracle Generative AI Professional
- Oracle AI Vector Search Professional
- Cyber Security certificates - Supraja Technologies
- National Cadet Corps - NCC C Certificate

Employment history

Feb 2025 - Present

Oracle

VBCS / OIC

Sep 2022 - Feb 2025

INFOLOB Global, Inc.

VBCS / OIC

Activities: NCC, bug tracking / bug hunting, creative photography, learning, research, and development in Generative AI.

THANK YOU

Let us build clear, reliable enterprise experiences.

I bring design thinking to Oracle VBCS and OIC implementation - from interface clarity and integration visibility to AI-assisted workflow automation.
